Description

The BASIC wire brushes for the straight grinder have been developed for machining hard-to-reach areas on workpieces made of steel. The product is suitable for removing rust, paint and lacquer as well as for surface preparation and finishing. These tools show their qualities especially when cleaning the inside of pipes. You can choose between different shapes of wire brushes for versatile tasks, between delicate (DW - knotted) and coarse (DZ - knotted). The SM version of the knotted DW brushes additionally prevents corrosion on the workpiece by using brass-plated steel wire, while the knotted version offers additional standing time.

Features

- + Especially suitable for hard-to-reach places due to their shape
- + Universal tool with good brush life
- + Wire type DZ plays as a function of speed and thus can be used on different bore diameters
- + Hardened and tough steel wire SZ for additional brush life and robustness
- + Brass-plated steel wire SM prevents corrosion

Applications

- + For removing rust, paint and lacquer, for cleaning welding seams and for surface preparation and finishing of steel
- + Specifically for cleaning the inside of tubes
